PATIENT CASE STUDY

DISCHARGE SUMMARY

HISTORY OF PRESENT ILLNESS

Patient is a woman being admitted for home care due to St. II Pressure Ulcer to left heel and need for wound management. Patient has past medical history significant for type 2 diabetes, hypertension, and nicotine dependence. According to patient's husband, John Smith (contact), she has exhibited no cognitive issues or functional deficits prior to this episode of care. The patient has been noted to have a good appetite and denies problems with sleeping or weight changes. She also denies any suicidal ideations and visual/auditory issues.

Patient's response to treatment and progress toward goals has been consistently satisfactory. Patient notes spouse is willing to assist with medication management and fulfill caregiver responsibilities. Patient and caregiver have been prepared and exhibit understanding of all medications. Patient's pressure ulcer has healed with positive epithelialization exhibited. Patient plans to move back home to Canada with the rest of her family. We will instruct patient and caregiver proper precautions for the ride back to Canada. Patient has scheduled doctor's appointment for this Friday before leaving town.
